TITLE: Preventing Patient Information from Security Threats using encryption algorithms

SANTHA KUMAR REDDY . B - 17MIS0008

Faculty : *prof.* Priya V

project link: <https://github.com/shanureddy4/MEDAPP>

ABSTRACT

These days most of the things are done through internet. Most organizations have online portals to communicate with customers. most of the medical apps like **DocsApp**, **1mg** are giving

doctor consultation and medicines to door steps through their applications. These applications make life easier for users. These app give consultation fee with fancy prices and user can able to share everything easily through phones. Even though they maintain privacy still doctors able to view all details about the patient which some patients doesn't want to. As these are big organizations, there is a chance for information disclosure by their staff. A survey said that nearly 8% of patient gets leaked from hospitals. So considering these problems and pandemic situation we are trying to build an application that is able to encrypt the patient data as soon as possible patient enter details and providing most secure connection until it reaches to the corresponding doctor. **Introduction**

We can imagine that there are applications for every domine. We can see that there are numerous applications even to treated by the doctor. In this project we develop an application that will Encrypt patient details as soon as patient enters and gives only necessity details to the doctor. Consultant can even schedule the consultation timings and send to the patient. A notification will be send to the patient as soon as consultant accept the request. As details are secured patient has anonymity while consulting to the doctor and able to express all his sufferings without worrying. **Literature Survey**

Reference number	Paper Title	Journal / Conference Name & Year	Proble m Statem ent	Algorit hms Applie d	Tools Used	Result s attain ed	Drawb ack In the syste m	Inferen ce
------------------	-------------	----------------------------------	---------------------	----------------------	------------	--------------------	--------------------------	------------

1	Techniq ues for prevent informa tion disclosu re via dynami c secure cloud resourc es	MICRO FOCUS/2011	Techniq ue to prevent informa tion pass from within the organiz ation	Dyna mic secure cloud resourc e	Cloud comput ing	These are just techni ques	None	These article shows that we can have various techni ques to preven t inform ation disclos ure
---	---	------------------	---	---------------------------------	------------------	----------------------------	------	---

2	Smurfbased Distribu ted Denial of Service (DDoS) Attack Amplifi cation in Internet	IEEE/2007	Intrude r able to create denial of service in target device	Smufi ng techni que	Exploitt tools such as smtraffi c	Able to create servic e denial on host device	Target device do no work after this attack	These article show how to amplify the smurf attack
3	DDoS attack algorith m using ICMP flood	IEEE/2016	As this article says that we should re conside r the protoco ls like TCP and ICMP to prevent flood attack	a DDoS Attac k based algori thm on ICMP Flood ing techni que.	DDoS attack tools	Succe ssful ICMP flood attack	Protoc ols regard ing ICMP should recons ider	This researc h is aimed at giving readers a brief outline of DDoS Attack s and its constit uents, primari ly the ICMP Protoc ol.

4	Applicati on check DocsApp	DocsApp.in/ 2015	Patient have no online portal to contact with doctors	In this applic ation they used lot of algorit hms to provid e seem less servic e to users	App develo pment	Able to provid e docto rs to the patien ts remot ely	Patien ts data can be seen every doctor	These site have inform ation about the app called DocsAp p and how they used to provid e seem less service s to the users.
5.	Practica l quantu m digital signatur e with a gigahert z BB84 quantu m key distribu tion system	OSAPUBLISH ING/2019	Enhanc ement needed for traditio nal digital keys	Quant um key distrib ution syste m	Tools to generat e quantu m keys.	Able to establ ish secur e conne ction betwe en server and client	Need to under stand many things just to have digital signat ure	These article shows how to genera te digital signatu re with a gigaher z BB84 quantu m key.

-----------------------------	----------------	--	------------------------------	-------------------------------	---------------	--------------------------	-------------------------------	---------------

6	<u>Secure Networ konChip Against Black</u>	scholarworks.boisestate.edu/2020	Tampering attacks make information	Algorithms used to reduce backdo	Not Mentioned	Able to secure network to maxim	May not possible for implementation	These paper tells how tampering
---	--	---	------------------------------------	----------------------------------	---------------	---------------------------------	-------------------------------------	---------------------------------

	<u>Hole and Tampering Attacks</u>		change during transmission	or attacks		um extent		occurs on transmission and how to prevent them.
7.	About 1 mg	1mg.com/aboutUs / 2015	Patient have no option to contact doctor when ever possible	Many algorithms applied to develop this application	App development	Provided online consultation with doctors and deliver medicines.	This also expose all patient details to the doctor.	This is a application which let's users to consult doctors online.

8.	Three party secure data transmission in IoT networks through design of a lightweight authenticated key agreement scheme	Science direct /2019	Need to have enhancement in transmission of data over a network	Three party secure data transmission	Not mentioned	Able to transmit data securely	Needs to be optimized for application level transmission	These papers will suggest to have three party secure data transmission in IoT networking
9.	Developing a secured image file management system using modified AES	Journal.portalgaruda.org	As many of us know AES algorithms it can be easy to understand our encryption level. So we need to customize it	Modified AES algorithm	This can be developed in any of programming language	Able to encrypt image successfully	This is easier than original AES algorithm	These papers suggest that we need to customize every algorithm according to our use.

10.	Economic Success of Physicians in the Online Consultation Market: A Signaling Theory Perspective	Tandfonline	Belief that online consultation makes no profit	Economically written. No algorithm involved	None	Online consultation will make much profit than usual	As article is theory perspective so implementation could be difficult.	This paper says that we online consultation will actually make profit for doctors.
-----	--	-------------	---	---	------	--	--	--

Problem Identified

Nearly 8 % of patient data is leaked from such applications. And patient gives fake identity while communicating with the doctor so it will difficult for an organization to identify him to send proper precautions and Patient want anonymity while contacting to the doctor.

Aim

We think that data is stolen directly from the database so we aim to develop an application that will encrypt the details as soon as patient enters and goes into database with encrypted and provide the patient details to the doctor as per patient needs.

Algorithm Used : Vigenere

STEPS

- 1) User need to enter personal details and his/her problem and doctor. At last user need to describe problem in brief.
- 2) After entering details the details will be encrypted and stored in firebase database.
- 3) Here for every doctor a key and credentials will be given.
- 4) On patient selecting doctor the respective key will be sent to database. 5) Using that key when doctor login it will display no of patients with their ID
- 6) On doctor login it will give patient ID and decrypted KEY.
- 7) Doctor need to search patient using patient ID and need to decrypt using KEY.
- 8) On patient view page doctor will able to see the information only which patient will provided for viewing.
- 9) On consulting a link will be generated and sent to doctor and patient on doctor timings.

10) Therefore patient will contact at given time

Program

cryption.ky

```
package com.example.myapplication
```

```

Doctor Login

The image shows a mobile application interface for a doctor login. At the top, there is a red header bar with a hamburger menu icon on the left and the word "Login" in white text. Above the header, the status bar shows the time "11:49", a settings gear icon, and signal, Wi-Fi, and battery icons. The main content area has a white background with a subtle shadow. It contains two input fields: the first has a person icon and the text "doc2@gmail.com"; the second has a lock icon and masked text "....." with a green cursor. Below these fields is a blue rounded button labeled "Log In". The background of the app features a blue and red geometric pattern. At the bottom is a black Android navigation bar with back, home, and recent apps icons.

Patient ID and KEY

The image shows a mobile application interface for logging in. At the top, there is a status bar with the time 11:52, a settings gear icon, and signal/battery indicators. Below this is a red header bar with a hamburger menu icon and the word "Login". The main content area is a white rounded rectangle with a subtle drop shadow. It contains two input fields. The first is labeled "Patient ID" and contains the text "AMWm". To its right is a small icon of a document with a lock. The second is labeled "Key" and contains the text "EVpNizT". To its right is a similar document with a lock icon. The background of the app has a red top section and a blue bottom section separated by a diagonal line.

Patient Search

The image shows a mobile application interface for "Patient Search". At the top, there is a status bar with the time "11:53", a settings gear icon, and signal/battery icons. Below this is a red header bar with a hamburger menu icon on the left and the text "Patient Search" in the center. The main content area is a white rounded rectangle with a subtle drop shadow. Inside this rectangle, there is a text input field containing "AMWm" with a teal cursor at the end. Below the input field is a blue rounded button with the word "SEARCH" in white capital letters. The background of the app is a gradient of red and blue with diagonal lines. At the bottom, there is a black Android navigation bar with back, home, and recent apps icons.

Decrypted details

The image shows a mobile application interface for a 'Patient Search' feature. The app has a red header bar with a hamburger menu icon on the left and the title 'Patient Search' in the center. Below the header, there is a search input field containing the text 'EVpNizT'. To the right of the input field is a blue button with the text 'DECRYPT'. Below the search field, the patient's details are displayed: 'Name :', 'Age : 21', 'Gender : MALE', 'Mobile :', and 'Email : SHANUREDDY007@GMAIL.COM'. Below the email, there is a label 'Address :' followed by a large white text box. Below the address box, the 'Problem :' is listed as 'GENERAL PHYSICIAN'. Below the problem, the 'Description :' is shown in a white text box with the text 'SUFFERING FROM COLD AND FEWER .'. The app has a dark blue and red geometric background. At the bottom, there is a black navigation bar with three icons: a back arrow, a circle, and a square. A blue play button icon is also visible in the bottom right corner of the app area.

Data and time allocation for patient and sent to email

The screenshot shows a mobile application interface with a red header bar. The status bar at the top displays the time 11:54, a settings gear icon, and signal/battery icons. The header bar contains a hamburger menu icon and the text "Patient Search". The main content area has a red background on the left and white on the right. A message "Please choose date and time to call patient" is centered. Below this, there is a date input field containing "2020/10/5" and a time input field containing "11:53". To the right of the date field is a calendar icon. Below the time field is a blue "SUBMIT" button. At the bottom, there is a text label "link to meet" above a text input field containing the URL "http://bit.ly/qQr4ISbEkRWrfA2E". To the right of the URL is a document icon. The bottom of the screen shows a black Android navigation bar with back, home, and recent apps icons.
